

Prabhat Kumar
Senior Software Engineer III

E-Mail: saxenaprabhat457@gmail.com
Mobile No: +91 9870260506

OBJECTIVE

Aim to be associated with a Progressive organization that gives me the scope to share my knowledge and skills in accordance with the latest trends and be a part of team that dynamically works towards the growth of organization and gives the satisfaction thereof.

PROFESSIONAL SUMMARY

- ✓ Having **9+ years** of Experience as a Software Developer in the IT industry.
- ✓ Having **6+ years** of Experience as a **Salesforce.com** platform with **Certified Salesforce Platform Developer I** and **Certified Salesforce Administrator**.
- ✓ Having **2 years** of experience as **Team Lead** of 6 developers and leading cross-function teams.
- ✓ Having **3.6 years** of Experience as a Java developer.
- ✓ Hands on experience in **SFDC Development** and **Admin Configuration**.
- ✓ Hands on experience in **Lightning Component using Aura Framework**.
- ✓ Hands on experience in **Java** and **J2EE (JDBC, Servlets, JSP)**.
- ✓ Hands on experience in **OOPS, Multithreading**.
- ✓ Hands on experience in **Data Structure**.
- ✓ Hands on experience in **Spring MVC, Spring Framework**.
- ✓ Hands on experience in **Hibernate Framework**.
- ✓ Hands on experience in **J2EE Design Patterns**.
- ✓ Good Knowledge in **XML** and **Web Services**.
- ✓ Good Knowledge in **Spring Boot** and **Micro Services**.

WORK EXPERIENCE

- ✓ Senior Software Engineer III in **ESoftLabs** Hyderabad from **July 2026** to **till now**.
- ✓ Senior Software Engineer III in **DBiz.ai** Kochi from **November 2025** to **February 2026**.
- ✓ Senior Software Engineer III in **Wipro (Payroll of CareerNet)** Bangalore from **April 2024** to **November 2024**.
- ✓ Senior Software Engineer III for **Photon Interactive Pvt. Ltd**, Bangalore from **October 2023** to **November 2023**.
- ✓ Associate- project for **Cognizant Technology Solutions India Pvt. Ltd**, Bangalore form **June 2021** to **May 2023**.
- ✓ Senior Software Engineer for **Concentrix Services India Pvt. Ltd**, Bangalore from **February 2020** to **May 2021**.
- ✓ Software Engineer for **Telerad Tech Pvt. Ltd**, Bangalore from **November 2018** to **Aug 2019**.
- ✓ Software Engineer for **Vision Impact Info Pvt. Ltd**, Bangalore from **December 2014** to **Oct 2018**.

EDUCATION

- ✓ **MCA** from **MVJ College of Engineering, Bangalore** affiliated to **VTU Belgaum, Karnataka** in 2014.
- ✓ **BCA** from **St. Xavier's College, Ranchi** affiliated to **IGNOU, New Delhi** in 2010.

CERTIFICATION

- ✓ Have completed **Salesforce Certified Platform Developer I** from Nov 2022.
- ✓ Have completed **Salesforce Certified Administrator** from December 2022.
- ✓ Have completed Diploma in **computer Hardware & Network engineering** from **HIIT Ranchi**.
- ✓ Have completed Certificate in Business Application (Tally) from Argus Academy Ranchi.

TECHNICAL SKILLS

Operating System	Windows XP/2000/7/10
Languages	Java8/11/17, SQL,
CRM Tool	Salesforce.com, Force.com
Force.com Technology	Apex, Apex Triggers, Batch Class, Lightning Component using Aura Framework, Data Loader, Visual Force, SOQL, SOSL, Data, Management, Sales Cloud, Services Cloud, Reports, Salesforce integration, Finance & Health Cloud, FLS, Agent Force, ETL tools, Data Migration,
J2EE Technologies	JDBC, Servlets, JSP, HTML, Java Scripts
Web Server	Apache Tomcat
Application Server	JBoss, Web Services APIs
Frameworks	Hibernate, Spring Framework (MVC, Spring boot)
Tools	Log4J, Maven, iReports, ORM, Omni Studio, CPQ, Billing, Docusign integrations
Databases	Oracle 10g, MySQL 5.0, Data Structure
IDE	Eclipse, VScode Editor, IntelliJ
Development Tools	Bit-Bucket, JIRA, Apex Data Loader, Git, Gitlab, CI/CD

PROJECT DETAILS

Project #1 : **ADP Enterprise**
Client : **ADP**
Role : **Senior Analyst (as Senior salesforce Developer III)**
Duration : **July 2026 to Till now.**
Environment : **Salesforce.com, Force.com, Admin, LWC, Aura Lighting component, SOQL, Integration, REST API, Sales, Service and Experience cloud, Apex, Trigger, flow, Agent force, Omni Channel.**
Description :

ADP Enterprise is an HR and payroll management project focused on employee management, payroll processing, tax calculations, and compliance. It helps organizations manage HR operations, employee data, salaries, deductions, and tax-related activities efficiently.

Responsibilities:

- Worked as a Senior Analyst (senior Salesforce Developer III) to design and deliver Salesforce CRM-based solutions using Force.com and REST APIs.
- Gather user requirements and support application design discussions and documentation.
- Worked in an agile-based scrum model, managed and coordinated with an offshore team and got the user

stories delivered to the client on time within the sprints.

- Designed and developed Salesforce solutions using **Apex, Triggers, LWC, Aura Components, Flow, and SOQL** based on business requirements.
- Managed **Salesforce Administration** including users, profiles, roles, permission sets, objects, fields, validation rules, and automation.
- Developed and maintained solutions across **Sales Cloud, Service Cloud, and Experience Cloud** to improve sales and customer service processes.
- Implemented **REST API and Salesforce integrations** with external systems, ensuring secure and reliable data exchange.
- Configured **Omni-Channel and Agentforce** capabilities to improve case routing, customer support, and service productivity.
- Analyzed business requirements, performed technical impact analysis, and provided scalable Salesforce solutions while following best practices.
- Supported **deployment, testing, troubleshooting, production issues, and performance optimization**, collaborating with developers and business stakeholders.

Project #2 : Wealth Management & Loan Automation Platform – Salesforce Financial Services Cloud (FSC)

Client : Ecorp(as working Freelancer)

Role : Senior Technical Analyst (as Senior salesforce Developer III, Freelance)

Duration : March 2026 to July 2026

Environment : Salesforce.com, Force.com, Salesforce Financial Services Cloud (FSC), Apex, Lightning Web Components (LWC), Flow, REST APIs, SOQL, Salesforce Security, Trigger, Agent force, Omni Channel.

Description :

Designed and supported a Salesforce Financial Services Cloud (FSC) platform to streamline wealth management, client relationship management, financial planning, and loan origination processes. The solution enabled financial advisors and lending teams to manage customer information, financial accounts, investment portfolios, loan applications, documentation, approvals, and customer interactions through a centralized platform. The platform integrated Salesforce FSC with enterprise banking and financial systems to automate business processes, improve data visibility, reduce manual effort, and provide a 360-degree view of clients across wealth management and lending operations.

Responsibilities:

- Worked as a Senior Analyst (senior Salesforce Developer III) to design and deliver Salesforce CRM-based solutions using Force.com and REST APIs.
- Served as **Senior Analyst and Technical Lead**, providing technical leadership across Salesforce FSC implementation, enhancements, and production support.
- Worked closely with business stakeholders, wealth managers, loan officers, product owners, and SMEs to understand business requirements and translate them into scalable Salesforce solutions.
- Led requirements analysis, solution design, technical estimation, development planning, and implementation activities.
- Designed Salesforce FSC solutions leveraging **Financial Accounts, Households, Contacts, Person Accounts, Relationships, Opportunities, Cases, and custom financial services objects**.
- Designed and implemented automation using **Salesforce Flow, Apex, Lightning Web Components (LWC), validation rules, approval processes, and platform capabilities**.
- Developed solutions to automate **loan application intake, eligibility checks, document collection, approval workflows, status tracking, and customer notifications**.
- Supported wealth management processes including **client onboarding, financial account management, household relationships, portfolio visibility, advisor activities, and client servicing**.
- Led integration design between Salesforce and external banking/financial applications using **REST/SOAP APIs, middleware, and event-based integration patterns**.
- Performed data analysis, mapping, cleansing, transformation, and migration activities for customer, financial account, loan, and relationship data.
- Defined security and access-control strategies using **Profiles, Permission Sets, Permission Set Groups, Roles, Sharing Rules, OWD, and field-level security**.
- Reviewed technical designs and code developed by team members and ensured adherence to Salesforce development standards and best practices.

- Provided technical guidance and mentorship to Salesforce developers and analysts and acted as the primary technical point of contact for the team.
- Coordinated with offshore/onshore development teams, architects, QA teams, business analysts, and project managers to ensure successful delivery.
- Participated in **design reviews, sprint planning, backlog refinement, daily stand-ups, code reviews, defect triage, and release planning.**
- Analyzed production issues, performed root-cause analysis, and coordinated resolution of critical application and integration defects.
- Supported **Salesforce deployments** across development, QA, UAT, and production environments using appropriate deployment and release-management processes.
- Ensured solutions were scalable, maintainable, secure, and aligned with Salesforce governor limits and platform best practices.
- Prepared technical design documents, solution specifications, data mappings, integration specifications, and deployment documentation.
- Collaborated with QA teams to define test scenarios and support **SIT, UAT, regression testing, and production validation.**
- Monitored system performance and proactively identified opportunities for process optimization and automation.
- Acted as a bridge between **business requirements and technical implementation**, ensuring delivered solutions met functional and regulatory requirements.

Project #3 : Aldar Properties (DBIZ AI)

Client : London Square Real Estate (Aldar Project)

Role : Senior Analyst (as Senior salesforce Developer III)

Duration : Nov 2025 to Feb 2026.

Environment : Salesforce.com, Force.com, LWC, Aura Lighting component, SOQL, Integration, REST API, Sales, Service cloud, Apex, Trigger, flow, Agent force, Omni Channel.

Description :

The Aldar Project is a scalable real estate management platform developed for London Square Real Estate to manage property listings, bookings, customer registrations, payments, contracts, and reporting. The system was built using salesforce platform architecture to ensure scalability, loose coupling, and high availability. Led end-to-end Salesforce implementation for enterprise real estate operations including property management, broker lifecycle, contract automation, and customer engagement workflows.

Responsibilities:

- Worked as a Senior Analyst (senior Salesforce Developer III) to design and deliver Salesforce CRM-based solutions using Force.com and REST APIs.
- Gather user requirements and support application design discussions and documentation.
- Worked in an agile-based scrum model, managed and coordinated with an offshore team and got the user stories delivered to the client on time within the sprints.
- Built and maintained RESTful APIs for core modules including Property Management, Booking, Payments, User Management, and Notifications.
- Designed scalable Salesforce architecture for real estate CRM transformation
- Developed custom solutions using **Apex, Lightning Web Components (LWC), Visualforce**
- Customized **Sales Cloud** for: Property inventory management, Lead lifecycle automation, Opportunity & contract tracking with sales orders. Broker & agent commission systems
- Built advanced automation using **Flows, Process Builder, Validation Rules, Approval Processes and FSL**
- Implemented secure data models (Profiles, Roles, Sharing Rules, Permission Sets)
- Developed executive dashboards and advanced reports for business insights
- Led **Data Migration** from legacy systems including data cleansing, transformation, and validation
- Integrated third-party systems: MLS platforms, Payment gateways (REST/SOAP APIs), Marketing automation tools and **Web Services APIs.**
- Managed CI/CD and deployments using **Change Sets, Git** and Conducted code reviews and optimized performance for scalable architecture
- **Salesforce Business Development (BD) Experience:** Participated in discovery workshops and requirement

- gathering sessions, Prepared solution demos and Proof of Concepts (POCs),
- Configures real estate units, applies pricing/discounts, and generates accurate quotes with payment plans during the sales process.
- Manages contracts, generates compliant invoices, tracks payments, and handles revenue recognition post-sale.
- Manage and execute digital marketing campaigns using Salesforce services Cloud.
- Analyze customer data and optimize campaigns to improve engagement and business growth.
- Responsibilities include managing APIs, troubleshooting integration issues, optimizing Salesforce processes, and collaborating with business teams to improve digital agreement operations.
- Positioned Salesforce solutions across: Sales, Service, Experience, Marketing Cloud
- Contributed to **Agent force solution positioning and using Data cloud.**

Project #4 : Life Time Ledger (Wipro)
Client : Standard chartered Bank
Role : Senior Software Engineer (as Senior Salesforce Developer III)
Duration : April 2024 to Nov 2024.
Environment : Salesforce.com, Force.com, LWC, Aura Lighting component, SOQL, Integration, REST API, Sales, Service & Finance cloud, Apex, Trigger, flow, AWS, Agent force, Omni Studio, Git, etc.
Description :

LTL (**Life Time Ledger**) is a cloud-based service application. LTL application mainly working to services and sales cloud. Life time Ledger is a service that helps with transaction notifications and each record stored in objects. The record will be like transaction, debit, credit etc.

Responsibilities:

- **Led and managed a team of 6 Salesforce developers**, providing technical direction, assigning user stories and tasks, tracking progress, resolving blockers, and ensuring sprint commitments were delivered on time.
- Acted as the **technical point of contact** for the Salesforce development team, coordinating with Business Analysts, Solution Architects, QA, DevOps, offshore teams, and business stakeholders.
- Reviewed business requirements and user stories, performed **technical impact analysis**, identified dependencies and risks, and participated in solution design and estimation activities.
- Led **Agile/Scrum ceremonies**, including sprint planning, daily stand-ups, backlog refinement, sprint reviews, retrospectives, defect triage, and release planning.
- Provided hands-on technical leadership in **Apex, LWC, Aura, SOQL, SOSL, Flows, Triggers, Visualforce, Financial Services Cloud, Service Cloud and OmniStudio.**
- Conducted **code reviews and pull-request reviews**, ensuring adherence to Salesforce coding standards, security, scalability, performance, governor limits, test coverage, and maintainability.
- Mentored junior and mid-level developers through **technical guidance, design discussions, troubleshooting, knowledge sharing, and best-practice implementation.**
- Designed and reviewed **Salesforce integration solutions** using REST API, SOAP API, Bulk API, Metadata API, HTTP Callouts, Named Credentials, External Credentials, and JSON.
- Provided technical leadership for **event-driven integrations** using Platform Events and Change Data Capture (CDC), supporting near-real-time synchronization between Salesforce and external systems.
- Guided the team in implementing **asynchronous Apex** using Queueable Apex, Future Methods, Batch Apex, Scheduled Apex, and appropriate integration patterns for scalable processing.
- Led Salesforce **Financial Services Cloud** development involving Households, Financial Accounts, Financial Holdings, Assets, Relationships, and customer financial processes.
- Reviewed and guided Salesforce configuration and security implementations including **Flows, Validation Rules, Approval Processes, OWD, Sharing Rules, Role Hierarchy, Permission Sets, Permission Set Groups, and Field-Level Security.**
- Coordinated **defect management and production support**, prioritizing issues, performing root-cause analysis, assigning fixes, tracking resolution, and communicating status to stakeholders.
- Managed **source control and deployment activities** using Git, Bitbucket, VS Code, and Salesforce CLI, including branching strategy, pull requests, code merges, deployment coordination, and release readiness.
- Took ownership of **end-to-end delivery**, from requirement analysis and technical design through development, code review, testing, deployment, production support, and stakeholder communication, while continuing to contribute as a hands-on Salesforce developer.

Project #5 : **Toyota Financial Services**
Client : **Toyota Motor Credit Corporation**
Role : **Senior Software Engineer III (as Senior Salesforce Developer III)**
Duration : **October 2023 to Nov 2023.**
Environment : **Salesforce.com, Force.com, LWC, Aura Lighting component, SOQL, Integration, REST API, Service & Finance cloud, Apex, Trigger, flow, Agent force, Data cloud, GitLab, Omni Studio, etc.**
Description :

TFS (**Toyota Financial Services**) is a cloud-based application. TFS application is created dealership agreement and authorized person to access. TFS application used to send customer agreement copy, dealership agreement copy and TFS agreement. These agreement papers sent by digit like PDF and after that fill required details and signature. TFS applications have many modules like customer agreement, dealership agreement, car buyer & seller agreement, insurance agreement etc.

Responsibilities:

- Worked as a **Senior Salesforce Developer and Team Lead**, leading and managing a team of **6 Salesforce developers** and taking ownership of technical delivery, development activities, and sprint commitments.
- Provided technical leadership, assigned development tasks, monitored team progress, resolved technical blockers, and ensured **on-time and high-quality delivery**.
- Mentored junior developers and conducted **code reviews, technical reviews, and knowledge-sharing sessions** to maintain coding standards, security, scalability, and maintainability.
- Collaborated with Business Analysts, Solution Architects, QA, DevOps, and business stakeholders to gather requirements, perform technical analysis, prepare design documentation, and develop scalable Salesforce solutions.
- Worked in an **Agile/Scrum environment**, participating in sprint planning, daily stand-ups, backlog refinement, sprint reviews, retrospectives, defect triage, and release planning.
- Designed, developed, and maintained Salesforce solutions using **Apex, Lightning Web Components (LWC), Aura Components, SOQL, Flows, Triggers, Visualforce, and Salesforce configuration**.
- Developed reusable **LWC components** for navigation, routing, date formatting, linkage pages, reports, search/filter functionality, validation, dynamic rendering, and data presentation.
- Integrated LWC components with **Apex controllers** for server-side processing, data retrieval, JSON serialization/deserialization, object mapping, string manipulation, and payload transformation.
- Designed and implemented **Salesforce integration solutions** using **REST API, SOAP API, Bulk API, Metadata API, Named Credentials, External Credentials, and HTTP callouts** to exchange data between Salesforce and external applications.
- Implemented asynchronous Salesforce integrations using **Queueable Apex, Future Methods, Batch Apex, Platform Events, and Change Data Capture (CDC)** to support reliable and scalable data processing.
- Worked with **Change Data Capture (CDC)** to publish and consume Salesforce record-change events and support near-real-time synchronization between Salesforce and external systems.
- Implemented **Platform Events** for event-driven communication between Salesforce components and external applications, supporting loosely coupled integration architectures.
- Worked with **Platform Cache** to improve application performance by reducing repeated database queries and efficiently managing frequently accessed data where applicable.
- Developed integration error-handling mechanisms, logging, retry processing, and exception handling to improve the reliability of Salesforce-to-external-system communication.
- Worked extensively with **Financial Services Cloud (FSC)**, including Households, Financial Accounts, Financial Holdings, Assets, Relationships, customer financial profiles, service requests, and transaction-related processes.
- Configured and customized FSC **data models, Flows, Validation Rules, Page Layouts, Record Types, Permission Sets, OWD, Sharing Rules, and Field-Level Security** based on business requirements.
- Developed business automation using **Salesforce Flows, Apex Triggers, Scheduled/Batch processing, and approval processes**.
- Developed optimized **search, filtering, sorting, and case-insensitive string comparison** functionality in LWC data tables and Salesforce list views.
- Created and maintained **Reports, Dashboards, Email Templates, Conga Templates**, and reporting solutions based on business requirements.

- Performed **integration troubleshooting, root-cause analysis, defect analysis, debugging, unit testing, and production support** for Salesforce and external-system issues.
- Managed source-code versioning and deployment activities using **Bitbucket**, including branching, pull requests, code reviews, and deployment coordination.
- Coordinated **development, QA/UAT, and production deployments**, ensuring successful implementation of Salesforce enhancements and integration changes.
- Ensured Salesforce solutions followed best practices for **security, scalability, performance, governor-limit management, bulkification, error handling, test coverage, and maintainability**.

Project #6 : **Juno Therapeutics GPS (Global position system)**
Client : **Bristol Myers Squibb (BMS)**
Role : **Associate-Project (Team Member as Salesforce developer)**
Duration : **June 2021 to May 2023.**
Environment : **Salesforce.com, Force.com, LWC, Aura Component, SOQL, Integration, REST API, Sales & Service cloud, AWS, Visualforce, Trigger, flow, VSCode, Omni Studio, Health cloud, Conga Template, etc.**
Description :

Juno Therapeutics GPS (Global position system) system, it is a cloud or portal-based application. Juno is product order and services provide application. How to create site care and visible to clinical, Commercial or portal. Site care to create to Account object and fill data in mandatory field.

Responsibilities:

- **Led a team of 6 developers** to deliver Salesforce CRM based on solutions using Force.com and Rest API.
- Worked as a **Salesforce Team Lead**, managing and coordinating a team of **6 Salesforce developers** and taking ownership of technical delivery across the project.
- Allocated development tasks based on team members' skills and project priorities, monitored progress, and ensured **on-time delivery of sprint commitments**.
- Provided technical guidance and mentoring to Salesforce developers on **Apex, LWC, Aura, SOQL, Flows, Triggers, integrations, and Salesforce best practices**.
- Conducted **code reviews** to ensure coding standards, scalability, security, performance, and maintainability across the Salesforce application.
- Reviewed technical requirements and collaborated with Business Analysts, Solution Architects, QA, DevOps, and business stakeholders to define effective Salesforce solutions.
- **Led Agile/Scrum activities**, including sprint planning, daily stand-ups, backlog refinement, task tracking, sprint reviews, retrospectives, and defect discussions.
- Monitored team progress, identified technical blockers and dependencies, and coordinated with cross-functional teams to resolve issues and maintain delivery timelines.
- Performed **technical design and impact analysis** for new requirements, enhancements, integrations, and production defects.
- Supported junior developers through **technical mentoring, troubleshooting, knowledge sharing, and development guidance**.
- Reviewed pull requests and deployment changes and ensured appropriate **unit testing, code quality, test coverage, and deployment readiness** before release.
- Coordinated **development, QA/UAT, and production deployments**, ensuring that changes were properly tested and delivered according to release schedules.
- Participated in defect triage, prioritized technical issues, performed root-cause analysis, and coordinated fixes across the development team.
- Communicated project status, risks, dependencies, technical challenges, and delivery progress to project stakeholders and management.
- Ensured the team followed Salesforce development best practices, including **bulkification, governor-limit management, security, reusable components, exception handling, and maintainable coding standards**.
- Balanced **hands-on Salesforce development and team leadership**, contributing directly to complex LWC, Apex, integration, and AWS-related development activities while managing the day-to-day work of the development team.
- Worked on Existing Aura components and LWC Components.

Project #7 : Reporting Tools
Client : Yes Bank
Role : Team Member as a Salesforce developer
Duration : Feb 2020 to June 2021.
Environment : Salesforce.com, Force.com, Admin, LWC, Aura Component, SOQL, Integration, REST API, Sales, Service and financial cloud, Visualforce, Trigger, flow, VSCode, Apex.
Description :

Reporting Tool application is use to trade-free portal application to enable its client to initiate transaction request online. The client has requested for a new reporting tool for all the customer to view their reports received from FFC. There shall be a separate menu "Reporting Tool" in the application. All the corporate customers who are utilizing trade finance product, along with corporate user will have the access to Reporting Tool application. In this application is divided in many modules like admin, MyReports, Schedule Reports, and Structured Reports etc.

Responsibilities:

- Gathered and analyzed business requirements and translated them into scalable Salesforce solutions in collaboration with clients, business analysts, architects, and project managers.
- Designed and developed solutions using **Salesforce Financial Services Cloud (FSC), Sales Cloud, and Service Cloud** to support customer, financial, and service-related business processes.
- Developed and customized Salesforce applications using **Apex, Triggers, SOQL, Visualforce, Lightning Web Components (LWC), Aura Components, and Flows.**
- Configured FSC capabilities including **Households, Financial Accounts, Financial Holdings, Assets, Relationships, and customer financial profiles.**
- Designed and implemented business process automation using **Salesforce Flow, Apex, Triggers, Validation Rules, and Approval Processes.**
- Developed reusable **LWC and Aura Components** and integrated them with Apex controllers for server-side processing and data exchange.
- Implemented integrations with external systems using **REST API, SOAP API, Bulk API, and Metadata API**, including request/response handling, data mapping, validation, and error handling.
- Implemented Salesforce security using **Profiles, Roles, Permission Sets, Permission Set Groups, Sharing Rules, and Field-Level Security** to ensure appropriate access to customer and financial data.
- Developed and maintained **Reports, Dashboards, List Views, and custom reporting solutions** to provide business users with actionable insights.
- Optimized **Apex code and SOQL queries**, applying bulkification and Salesforce best practices to improve application performance and comply with governor limits.
- Performed **unit testing, debugging, code reviews, troubleshooting, and root-cause analysis** to ensure application quality and stability.
- Supported Salesforce deployments and release activities using **VS Code and Salesforce CLI**, across development, testing, UAT, and production environments.
- Worked in an **Agile/Scrum environment**, participating in sprint planning, daily stand-ups, backlog refinement, retrospectives, and sprint delivery activities.
- Provided technical guidance to development team members, reviewed code, promoted reusable solutions, and mentored junior Salesforce developers.
- Provided **post-production support**, collaborated directly with clients and stakeholders to resolve issues, implement enhancements, and deliver solutions aligned with business objectives.

Project #8 : Hospital Management System
Client : Telerad Tech
Role : Team Member as a Salesforce developer
Duration : Nov 2018 to Aug 2019.
Environment : Salesforce.com, LWC, Aura Lighting component, SOQL, Integration, REST API, Sales, Service and Health cloud, Visualforce, Trigger, flow, VSCode, Apex, Integration, REST API, DocuSign. FSL etc.

Description :

Hospital Management System (HMS) is an integrated healthcare application designed to manage **patient registration, doctor–patient interactions, billing, insurance, pharmacy, blood bank, HRMS, and hospital maintenance operations**. The system supports end-to-end hospital workflows for medium- to large-scale healthcare organizations, improves operational efficiency, and provides centralized access to patient, billing, and insurance information.

Responsibilities:

- Worked as a **Software Engineer** involved in application development, enhancement, testing, debugging, and production support.
- Analyzed business requirements and translated functional requirements into technical solutions.
- Developed and enhanced modules including **Patient Registration, Billing, Insurance, Pharmacy, Blood Bank, HRMS, and Maintenance**.
- Developed patient registration functionality supporting **pre-registration, OP registration, and IP registration**.
- Implemented functionality for maintaining patient demographics, registration details, admission details, and patient-related information.
- Developed billing functionality for **doctor consultation fees, laboratory charges, medicine charges, service charges, and other hospital services**.
- Implemented **Insurance Policy** functionality to maintain insurance provider, policy number, policy validity, coverage, patient insurance details, and claim-related information.
- Integrated insurance information with patient registration and billing processes to support insurance-based hospital transactions.
- Developed and maintained **Pharmacy** functionality for medicine sales, inventory, stock management, and medicine-related transactions.
- Worked on **Blood Bank** functionality for donor information, blood groups, blood stock, and blood issue/receipt transactions.
- Contributed to **HRMS and Maintenance** modules based on business requirements.
- Developed database components including **tables, queries, stored procedures, functions, and data validation logic**.
- Implemented business rules, validations, and error handling to ensure data accuracy and consistency.
- Integrated data flow between different modules to maintain consistency across **Registration, Billing, Insurance, Pharmacy, and Accounts**.
- Performed **unit testing, integration testing, debugging, and defect resolution** for assigned functionalities.
- Prepared technical documentation and supported application deployment and release activities.
- Provided **production support** and resolved issues reported by hospital users.
- Worked on bitbucket for project deployment.

Project #9 : Sales Tracking System
Client : Alta Knitwear Canada
Role : Team Member as a java developer
Duration : Jan 2018 to Oct 2018.
Environment : Java, Jsp, Spring, Hibernate, Oracle, JBoss, Eclipse.
Description :

Sales Tracking System is aimed at automating the sales process for a medium to large-scale transactions. This Module is divided into separate sub modules like Reorders Engine, Product Sale Engine, Product Dispatch and Customer History. Reorder Engine triggers a purchase request as and when the stock levels fall below the estimated sale. When the Customer raises the Purchase Invoice for particular items, the system checks for the availability of the Items and gives the feedback to the dealer. When the Product is available, the system raises the Sales Order and records the consignment details to be dispatched. Product Dispatch Engine keeps track of the logistics that are used in delivering the product to the customer. It also checks for the delays and any bottlenecks in the transport system.

Customer History, In this module Customer details are captured. The types of products ordered, quantity taken and maintains all information for providing Customer Service.

Responsibilities:

- Designed JSP's as per the Requirement.
- Implemented Controller Classes.
- Written Spring Service Interfaces and their implementations.
- Written DAO's and their implementations with Hibernate.
- Injected Spring DAO's into Spring Services.
- Written Hibernate Mapping Documents.
- Written Hibernate Persistence Classes.
- Updated Spring Context xml document

Project #10 : **Automation of Automobile Transaction**
Client : **Novera Inc, U.S**
Role : **Team Member as a java developer**
Duration : **May 2016 to Oct 2017**
Environment : **Java, Jsp, Spring, Hibernate, Oracle, JBoss, Eclipse.**
Description :

Automation of Automobile Transaction is a portal project intended basically for people who deal in buying and selling of used vehicle. This project is designed keeping in mind, people involved in the process of buying and selling used vehicle like buyers, sellers, brokers, financial people, who provide finance, insurance companies, police and the road transport authority. Buyers Who likes to buy any automobile like car need to register and also should give information regarding vehicle like model, brand, color, expected value, seller who wants to sale his automobile need to register and also has to give information like what type of automobile is looking for, make, investing value, broker id etc...

Responsibilities:

- Implemented Controller Classes.
- Written Spring Service Interfaces and their implementations.
- Written DAO's and their implementations with Hibernate.
- Injected Spring DAO's into Spring Services.
- Written Hibernate Mapping Documents.
- Written Hibernate Persistence Classes.
- Updated Spring Context xml document.

Project #11 : **Presbyterian Health Care, U.K**
Client : **Presbyterian Health Care, U.K**
Role : **Team Member as a java developer**
Duration : **March 2015 to Feb 2016**
Environment : **Java, Jsp, Spring, Hibernate, Oracle, JBoss, Eclipse.**
Description :

This project mainly focuses on Doctors and Patients relation. This software facilitates a doctor to get a registration which provides a quick reference of past history related to a patient like his/her symptoms, drug allergies, family history etc. Doctors can use these information for further advices. So doctors will feel simple while treating a patient which he already treated before. In this system patient will also facilitate by user-id and password to get online appointment with a doctor. So no patient will suffer for getting an appointment because all information about doctors like his/her available hospital name, available time etc. will be open in the web for that day. If a patient wants appointment for a doctor then he can send a message and can engage.

Responsibilities:

- Designed JSP's as per the Requirement.
- Implemented Controller Classes.
- Written Spring Service Interfaces and their implementations.
- Implemented based on MVC Architecture.

PERSONAL INFORMATION

- Date Of Birth : 20th Jan 1987
- Gender : Male
- Marital Status : Married
- Nationality : Indian
- Language Known : English, Hindi
- Permanent Address : jori, Chatra Jharkhand - 825403
- Permanent Address : Mahadevapura, bangalore-48

DECLARATION

I hereby declare that the above-mentioned information is correct and true to my knowledge.

Place: Bangalore

Date:
